AiX Track

RMPS & CO · INTERNAL COST NOTE

Cost of one 1-hour MOC

Prepared 21 October 2026 · Exchange rate used: ₹96 per US$ (application setting)

> **≈ ₹60 – ₹78**
>
> Estimated transcription and AI cost of one 1-hour meeting, before hosting and storage.

1. Per-meeting cost

Item	Basis (rate used in the application)	1-hour meeting
Sarvam transcription — standard	₹0.49 per minute of audio	**₹29.40**
Sarvam transcription — with speaker names	₹0.59 per minute of audio (used instead of standard)	**₹35.40**
ChatGPT (GPT-4o) — meeting brief and topic scan	US$2.50 input / US$10 output per million tokens; about 55,000 tokens read and 3,500 written	**≈ ₹12 – ₹18**
Claude — MOC drafting	US$2 input / US$10 output per million tokens; about 45,000–50,000 tokens read and 10,000–15,000 written	**≈ ₹18 – ₹25**
Total — standard		**≈ ₹60 – ₹70**
Total — with speaker names		**≈ ₹65 – ₹78**

- **Regenerate:** re-runs only ChatGPT and Claude on the saved transcript — about ₹30 – ₹40 each time. Transcription is not charged again.
- AI costs depend on transcript length; Gujarati and mixed-language meetings use more tokens and sit at the higher end.

2. Saved recording

File	Approximate size per 1-hour meeting
Original upload / recording	30 – 60 MB
Converted audio (16 kHz mono WAV)	about 115 MB
Total if both are kept	**about 150 – 175 MB**

Storage cost per meeting is negligible. The practical limit is server disk space: the health check alerts at 85% full, and Google Drive offload moves recordings off the server.

3. Hosting

Hosting is a fixed monthly cost, not a per-meeting cost. It is recorded in the admin usage page (setting *hosting_monthly_inr*).

> **Hosting cost per meeting = monthly hosting cost ÷ meetings processed that month**
> Illustration only: ₹800 per month ÷ 100 meetings = ₹8 per meeting.

4. What the user is charged

Service	Credits per 1-hour meeting
Generate MOC	60 credits (1 per minute)
Generate MOC with speaker names	120 credits (2 per minute)
Regenerate	30 credits (0.5 per minute)

Margin per meeting = credits charged × price per credit in the purchased pack, less the costs above.

5. Basis and limitations

- Rates are those configured in the application. Provider prices change; verify against each provider's current price page before using these figures externally.
- AI token figures are estimates for a typical 1-hour meeting. Actual cost per meeting is logged in the application and visible on the admin usage page.
- Figures exclude GST, payment-gateway charges, email and Google Drive costs.
